|                                                                                                                                                                                             |                            |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| • <b>IBM (Red Hat)</b>                                                                                                                                                                      | Munich, Germany            |
| • <i>AI Data Analyst Working Student</i>                                                                                                                                                    | <i>Oct 2026 – Sep 2028</i> |
| ◦ <b>AI Workflows:</b> Serving as an AI Adoption Leader in a GTM & Operations team.                                                                                                         |                            |
| ◦ <b>Data Analytics:</b> Analyze data in PostgreSQL to guide regional GTM strategy and operations.                                                                                          |                            |
| • <b>Amazon</b>                                                                                                                                                                             | Munich, Germany            |
| • <i>Program Manager Working Student</i>                                                                                                                                                    | <i>Mar 2026 – Sep 2026</i> |
| ◦ <b>Product Analytics:</b> Consolidated 10 million data records into one SQL campaign dashboard, enabling 24/7 monitoring across Amazon's grocery portfolio.                               |                            |
| ◦ <b>Go-to-Market:</b> Managed 15+ Amazon-funded campaigns end to end, including Prime Day, averaging 20% YoY new customer growth.                                                          |                            |
| ◦ <b>Reporting Automation:</b> Cut WBR preparation from 6 hours to 15 minutes using a Claude Code workflow to synthesize dashboard data and meeting transcripts into weekly reports.        |                            |
| <i>Product Manager Intern</i>                                                                                                                                                               | <i>Aug 2025 – Feb 2026</i> |
| ◦ <b>Prioritization Framework:</b> Built a model prioritizing 30 vendors by cost impact over defect count, guiding sprints that delivered \$250K in Q4 savings.                             |                            |
| ◦ <b>Performance Tracking:</b> Automated a weekly supplier scorecard for delivery, defect, and compliance metrics, improving on-time delivery by 15% among the 10 lowest-scoring suppliers. |                            |
| ◦ <b>Product Launch:</b> Shipped an RAG-based AI assistant for a 1,500-file knowledge base, cutting time to find operational metrics by 80%.                                                |                            |
| • <b>TUM School of Management</b>                                                                                                                                                           | Heilbronn, Germany         |
| • <i>Teaching Assistant</i>                                                                                                                                                                 | <i>Sep 2025 – Feb 2026</i> |
| ◦ <b>Research Automation:</b> Reduced research preparation time by 40% by building a Python-based agentic AI workflow for literature review, qualitative synthesis, and validation.         |                            |
| • <b>Campus Founders</b>                                                                                                                                                                    | Heilbronn, Germany         |
| • <i>Program Manager Working Student</i>                                                                                                                                                    | <i>Sep 2025 – Feb 2026</i> |
| ◦ <b>User Research:</b> Led 150+ surveys and 20+ interviews, informing a recruitment shift toward bachelor's students that grew next-cohort applications from 60 to about 210.              |                            |
| ◦ <b>PRD Standardization:</b> Standardized PRDs across 5+ program teams using Confluence templates and SOPs, replacing fragmented reporting and roughly halving creation time.              |                            |
| • <b>VEON</b>                                                                                                                                                                               | Astana, Kazakhstan         |
| • <i>Product Manager Intern</i>                                                                                                                                                             | <i>Jul 2023 – Oct 2023</i> |
| ◦ <b>A/B Experimentation:</b> Redesigned the signup flow through iterative A/B tests, cutting onboarding from five steps to two and lifting new-user conversion by 15%.                     |                            |
| ◦ <b>Engineering Collaboration:</b> Partnered with backend and frontend engineers to automate analytics dashboard deployment, cutting setup time from one day to 10 minutes.                |                            |

PROJECTS

- **Agent Orchestration:** Voice agent built on HappyRobot with Python FastAPI microservices.
- **Personal Portfolio:** Built a chat-first portfolio in TanStack Start, React 19, and Vite on Cloudflare Workers.
- **Google Developer Group:** Grew GDG Astana from 100 to 325 and led DevFest 2023 for 500+ attendees.
